

Cities are at the center of the climate crisis

City Profile **Cairo**

With extreme weather events becoming more frequent and severe, cities face significant risks to their environments, economies, and public health. But they also hold the potential to implement creative solutions for climate adaptation and resilience.

A new survey of 5,000 people, with 500 respondents in each of ten cities, reveals insights about their perceptions of their city's preparedness for climate-related risks. (% of respondents)

Zurich Insurance Group (Zurich) has supported new Economist Impact research addressing climate change in urban environments worldwide and providing actionable insights for building resilient cities.

The report, **"Resilience from the Ground Up: Assessing City-Level Approaches to Climate Risk and Adaptation"** is based on a literature review, interviews with 15 climate experts and a general population survey gathering insights from 5,000 residents in Amsterdam, Cairo, Cape Town, Dubai, Jakarta, Madrid, Mumbai, New York City, São Paulo and Tokyo. The study explores how residents view climate change, how their cities need to adapt and their sense of personal accountability toward the issue.
