

Solutions for protecting your business

Zurich Resilience Solutions
Risk Engineering

Increasing insight, reducing risk

Zurich Resilience Solutions - Risk Engineering

Zurich's risk engineers and consultants design and deliver risk services for customers across a range of industries and global locations to help organizations identify and manage risk exposures.

With all risks, a deep understanding will lead to a well-planned approach that renders better results than introducing control measures that do not address the real issues. We work with our customers to gain a true understanding of risks you face through the use of proprietary tools such as RECAT, Safety Culture Assessments, Zurich Hazard Analysis and our Incident Loss analysis. These tools help our customers identify risks, assess their existing management systems, and measure performance providing customers with a continuous cycle of improvement.

Tailored to your organization and working with you, we build a package of services to help you best manage your risks. In addition, we partner with specialist third parties to ensure you are working with the most in-depth expertise.

Our in-house team of experts have hands-on experience working within the specific industries we service. We work with our underwriting and claims teams to understand customers' challenges and issues and work together on effective solutions.

Taking a data-led approach, we provide risk insights, globally consistent peer benchmarking and claims analysis, which means our recommended actions are specific to your needs.

All of our customers can access our award-winning digital tools including My Zurich and Zurich Risk Advisor and our Remote Collaboration tool.

We offer a number of training services catering for a range of organizational needs.

This guide details our available services and what benefits these have for your organization.
