

# Supply Chain Resilience

## Rebuilding Supply Chains: a holistic approach to supply chain risk management.

**Resilient supply chains are a key element of business success.** Brexit, Climate Change, Covid-19 and increasing cyber threats have created a perfect storm. Labour shortages, availability of transport and raw materials, and rising costs are all impacting global supply chains.

Our range of risk management solutions will help you protect revenue streams, increase productivity and manage various risk exposures by identifying points of failure; quantifying supply chain resilience; defining mitigation strategies and actions; assessing the related financial exposures; and determining ESG risks within the supply chain.

### Who will benefit?

Organisations dependent upon external providers to supply products or services to their customers; businesses requiring data-driven assessment of current or planned supply chain models; managers seeking proactive mitigation of disruptive events; regulatory bodies and organisations supporting strategically critical industries.

### Supply Chain Resilience Health Check

An assessment of your end-to-end supply chain risk management processes will be undertaken to provide an enterprise-wide picture of your supply chain risk profile. It provides deeper understanding of vulnerabilities in your supply chain, with the objective of articulating risk responses and measures of successful risk mitigation.

### Sustainable & Ethical Procurement & Supply Chain Assessment

We assess and provide you with feedback on your business's sustainable procurement elements relating to Environmental (Climate), Social Values & Economic Factors. We also review and report on your Business & Critical Suppliers Codes of Conduct (Mission, Values & Guiding Principles) and how these align to Ethical Procurement & Supply.

### Supply Chain Loss Scenario Analysis

Events such as natural disasters, fires, security breaches, and many others can all cause supply chain disruption. Working with you we will tailor a realistic scenario to test organisational resilience, explore interdependencies and recovery options. The analysis helps identify how the business response aligns to insurance coverage and highlights any gaps or weaknesses.

### Contingent Business Interruption (CBI) and Interdependency Risk Assessments

An in-depth Business Interruption Risk Assessment that focuses on your supply chain, both internal and external. In many cases, large physical property damages in your supply chain can lead to large business interruption losses and long periods of recovery to the pre-loss status of the business from a financial perspective. We can help assess your CBI and Interdependency exposures, hazards, and controls, provide robust loss ratio calculations, offer Risk Improvement Advice as well as insights into additional steps to build supply chain resilience.

### Critical Suppliers Risk Assessment

The risk assessment will identify critical assets and facilities, including links within your suppliers or distribution network. We can support you with understanding and assessing the risks within your suppliers' facilities which could have an impact on your own supply chain and business resilience. By completing assessments of the critical components within your suppliers, risks that may affect your capability to deliver can be identified and appropriate control measures implemented.

### Supply Chain Contingency/Risk Mitigation Planning

We will assist with developing risk-informed plans to protect your supply chain and incorporate into your overall business continuity planning.

### Collaboration With an AI Risk Management Solution

Working with a leading supply chain risk management software provider we can reduce organisation risk by creating a more resilient supply network. The software provides an early warning tool for monitoring and notification 24/7/365 of all sites, with immediate automatic alerts should your supply chain become compromised.
