SPEAR TIP

A company of  **ZURICH**

Secure, respond,
prepare with SpearTip

All purpose-built for MSPs

A Cybersecurity & risk partner built for MSPs

Best-in-class MDR. Embedded incident response. Streamlined cyber insurance for your clients.

Helping Managed Service Providers differentiate, reduce risk, and grow – without adding operational burden.

The challenge MSPs face today

Managed Service Providers are under increasing pressure to deliver stronger cybersecurity outcomes while managing limited internal resources.

Today's MSP reality includes:

Escalating security threats
requiring 24/7 monitoring
and rapid response

**Unpredictable incident
response**, often costly
and disruptive

Customer retention pressure,
with low switching barriers
and intense competition

**Growing compliance and
insurance expectations**
from end clients

Operational complexity,
driven by multiple
vendors and tools

**MSPs need more
than tools.**

**They need a partner
purpose-built for
security, response,
and risk.**

The SpearTip value proposition for MSPs

SpearTip partners with MSPs to strengthen their security offering and help them stand out in a crowded market

Our approach is built on **three integrated pillars**, designed specifically for MSP environments:

1. Superior managed security services with SpearTip's SOC

Enterprise-grade security operations delivered as a seamless extension of your MSP offering.

- 24/7 Managed Detection & Response (MDR)
- In-house security experts using best-in-class technology
- High-touch service model with dedicated account support
- Scalable across MSP client portfolios of all sizes

What this means for MSPs: Deliver advanced 24x7 cybersecurity without building or staffing a SOC.

2. Embedded incident response

When incidents happen, speed and expertise matter. SpearTip embeds incident response directly into the MSP security model:

- Same analysts, tooling, and triage processes as MDR
- Rapid investigation, containment, and remediation of live incidents
- Discounted incident response hours for MSPs and their clients
- Predictable access to IR expertise, no scrambling for vendors

What this means for MSPs: Faster resolution, reduced disruption, and confidence when clients need you most.

3. Cyber insurance alignment for MSP Clients

Cyber insurance has become harder to place, especially for under-secured organizations. SpearTip helps MSPs support their clients by aligning cybersecurity controls with insurance requirements through trusted broker partnerships.

- Streamlined cyber insurance application experience
- Access to competitive and preferred cyber insurance terms via broker partners
- Designed for clients with less mature and mature security controls
- Reduced friction for MSPs bundling security and risk transfer

What this means for MSPs: Help clients get insured faster and on better terms, strengthening trust and long-term relationships.

How This Helps MSPs Grow

By partnering with SpearTip, MSPs can:

- Differentiate their service offering in competitive deals
- Increase customer retention and switching costs
- Unlock new revenue streams tied to security and response
- Reduce operational risk tied to cybersecurity incidents
- Position themselves as trusted advisors, not just IT providers

Our services (Delivered in-house)

Managed security

- Managed Detection & Response (MDR)
- Endpoint & identity threat detection
- Microsoft 365 security monitoring

Incident response

- Incident investigation and containment
- Digital forensics & response
- Ransomware and breach response support

Advisory services

- Vulnerability and risk assessments
- Incident response plan development
- Tabletop exercises and readiness reviews

What our clients say

The SpearTip team was remarkable during our incident. We felt supported every step of the way and knew we had the right partner.

– Information Services Lead

Their ability to quickly identify and contain malicious activity gave us confidence when it mattered most.

– IT Director

Ready to strengthen your security offering and give your clients true peace of mind?
